Conference on Fractional Integrals and Related Phenomena in Analysis

Aim & Scope

This is the second conference on fractional integrals and related phenomena in analysis. The aim of this conference is to continue to gather together researchers working on various problems involving fractional integrals, the Hausdorff content, fractional maximal functions, and related phenomena and provide them with an opportunity to present their latest results. As in the previous conference in this ongoing series, our goal is to work to build a critical mass of researchers, thereby increasing the impact of results this community has been working on. Toward progress on open questions and the crystallization of interesting research directions, we will organize a problem session to facilitate additional focused interaction of the participants.

Organizers

Cody Stockdale Clemson University

Daniel Spector National Taiwan Normal University

Chun-Yen Shen National Taiwan University

Invited Speakers

Ritva Hurri-Syrjänen

University of Helsinki

Sanghyuk Lee

Seoul National University

Ji Li

Macquarie University

Phuc Nguyen

Louisiana State University

Carlos Perez

University of the Basque
Country UPV/EHU and BCAM

Bogdan Raita

Georgetown University

Hiroki Saito

Nihon University

Eric Sawyer*

McMaster University

Dmitriy Stolyarov

St. Petersburg State University

Hitoshi Tanaka

National University
Corporation Tsukuba
University of Technology

Alexander Volberg

Michigan State University

Julian Weigt

University of Warwick

***TBC**
